

Transcript audit — entry requirements, subject credits and blockers

European Master's & Scholarship Research · Tunisian applicant, 180-ECTS Licence in Business Intelligence · compiled 2026-08-16 · 181 programmes, 103 funding schemes

The binding constraint across most of this dataset is **not** total credits. It is **named subject credits**, and a Business Intelligence degree from a business school can fail these while holding far more than 180 ECTS in total.

Take your transcript, and for each row below count the ECTS you actually hold in that category. Do this **before** spending effort on applications — a failure here is silent, and it surfaces after you have paid an application fee.

Corvinus University of Budapest — the most precisely documented in the dataset

Credit recognition is **mandatory** for every holder of a foreign bachelor. Source: Corvinus 2026 credit-recognition table ("honnán-hova tábla").

Programme	Full requirement	Absolute entry floor	Categories you must evidence
Business Informatics	70 ECTS	40 ECTS	Natural Sciences 10 · Business & HR Management 20 · Informatics 40
Artificial Intelligence in Business	36 ECTS	24 ECTS	Methodology 12 (max 6 catch-up) · Programming, Python or R 12 (max 6 catch-up) · Economics — business economics, accounting, finance, marketing, management 12 (all catch-up-able)
Social Data Science	36 ECTS	30 ECTS	Methodology 12 — cannot be caught up · Programming 12 — cannot be caught up · Economics or Social Sciences 12 (6 catch-up-able)
Communication and Media Studies	30 ECTS	30 ECTS	One pooled 30 ECTS across business, communication, HR, marketing, media theory, sociology, social psychology, PR — no catch-up allowance at all

Read this carefully: *Social Data Science* is the sharpest risk in the whole dataset. Its 12 ECTS of methodology and 12 ECTS of programming must already be on your transcript and **cannot be made up after admission**. *Business Informatics* wants **40 ECTS of named informatics courses**, which a business-school BI degree may simply not carry, however technical it felt to study.

Erasmus Mundus — checked before your application is scored

Programme	Requirement
EMAI	12 ECTS each of mathematics, programming and computing science. Accepts a non-ICT 180-ECTS bachelor with 10–60 ECTS of bridging.

Programme	Requirement
DEAI	Accepts a 180-ECTS bachelor. Its rubric awards points per year of work in an IT or BI position — your work history is scored, not just tolerated.

Other named prerequisites

Institution	What must be on the transcript
Vilnius — Digital Marketing	20 ECTS in Business/Public Management or Economics, plus a 70% grade average
Vilnius — Strategic Management of IS	20 ECTS in microeconomics, macroeconomics or econometrics (or 3 years' verified work experience), plus 60% average
Tilburg / TU Eindhoven JADS	15 EC mathematics and statistics (min 5 EC each), plus Databases, Data Structures and Algorithms, Programming (preferably Python), Machine Learning / Data Mining
Algebra — Economics of Digital Business	180 ECTS; if the degree is not in Economics you need "at least a few basic economics courses", else a free online preparatory programme is assigned (can be taken after enrolment)
Algebra — Data Science / Digital Marketing	180+ ECTS in technical, natural or social sciences; without prior technical/CS/social-science study a preparatory programme is assigned that is charged on top of tuition and normally must be completed before enrolment
UTM Moldova — Data Science	Numerical Methods, Data Structures and Algorithms, OOP, Procedural Programming, Python, Human-Computer Interaction. Different-field candidates complete prerequisites before admission or via bridging modules
AUTH — Digital Media, Computational Intelligence	A degree in computer science, electrical/computer engineering or a numerate physical science — a real risk for a BI licence
UCC — MA Film & Screen Media	The honours degree must be " in the Humanities ". A BI licence fails on subject before credits are considered

Grade floors and administrative gates

Institution	Requirement
Estonian Academy of Arts	At least 60% of the highest possible CGPA
Tallinn University	At least 60% of the possible maximum
Vilnius	70% (Digital Marketing) / 60% (Strategic Management)
Romania (state scheme)	7/10

Institution	Requirement
IE Dean's Award	GPA $\geq$ 3.8/4 (9.5/10)
PJAiT, Poland	A Tunisian diploma needs a written NAWA Director decision confirming eligibility to continue studies, plus apostille. Tunisia is on no exemption list.
FAMU, Czechia	Foreign-diploma nostrification must be completed to enrol in September. This, not credits, is the real gate.
Estonian Academy of Arts	Tunisia is not listed on its country-requirements page — email admissions@artun.ee for the document set.
Greece (all)	DOATAP / Hellenic NARIC recognition of the foreign title. At AUTH DMCI, recognition is a condition of being awarded the master's , not merely of entry.

Recency rules — these behave as hard cutoffs

Institution	Rule
Vilnius University	For non-EU applicants, the gap since the bachelor must not exceed five years
ASE Bucharest (FABIZ)	Non-EU applicants must have graduated 2023 or later

E4 checked its whole territory for further recency rules and found none, so these two appear to be the exceptions rather than a regional pattern.

Benelux — where a 180-ECTS licence is blocked or bridged

Dutch and Flemish institutions almost never state a credit total. They state **level comparability** ("comparable in level with an academic bachelor obtained at a Dutch research university") or **subject credits**. Both are harder to satisfy than a number, and two of them turn on facts about Esprit rather than about you.

Two exclusions that depend on how Esprit is classified

Institution	The clause	Why it matters
UCLouvain	<i>"Professional degrees are not accepted even when they are delivered by a recognized academic institution."</i> Also requires the awarding institution to be UNESCO/WHED- or AUF-recognised and the degree to already grant access to a management master at home	Esprit is a private school and the Licence is professionally oriented. This is a real risk, and it is checkable in advance — look up Esprit in the UNESCO WHED database and ask Esprit whether its Licence grants access to a Tunisian management master

Institution	The clause	Why it matters
UvA — Data Science and Business Analytics	<i>"A Bachelor's degree from a University of Applied Sciences will not be taken into consideration."</i>	Whether a private Tunisian Licence is read as academic or applied is decisive, and the page gives no way to tell in advance

Bridging routes — a year, or a wall

Institution / programme	What happens to a BI licence holder
Maastricht — MA Media Studies: Digital Cultures	Direct entry restricted to media, communications, film/TV, history, social science, humanities or liberal arts. Business Intelligence is not on the list; the page routes exactly this case through a full pre-master year
Ghent — MSc Business Engineering	Six learning paths totalling 157 ECTS , including 21 ECTS technical/technological and 18 ECTS informatics. A BI licence will likely miss the technical path, triggering a preparatory programme of 45-90 ECTS . GMAT/GRE is mandatory for non-EEA: no score, no academic admission
KU Leuven — Master of Business Engineering	Subject minima of 36/45/6 ECTS. The fallback preparatory programme is Dutch-taught only — so a shortfall here is a rejection, not a bridge
Tilburg — Business Analytics and Operations Research	Mathematics benchmarked at real-analysis and mathematical-statistics level; pre-Master up to 36 ECTS
Tilburg — Marketing Analytics	Needs 12 ECTS specifically in Marketing, Marketing Research or Consumer Behavior; pre-Master up to 30 ECTS
JADS — Data Science in Business and Entrepreneurship	Direct entry needs 15 EC maths and statistics plus databases, data structures and algorithms, programming and ML. Meeting only the 15 EC routes you through the JADS pre-Master

One that may reject you for being too technical

Tilburg — Data Science and Society states it is *"not a good fit for students who have completed a program in which data science techniques have already been extensively covered."* A Business Intelligence degree plausibly falls foul of this, which is the opposite of every other risk on this page.

Unresolved in Benelux

- **RSM — MScBA Business Analytics and Management.** RSM's binding per-country degree requirements sit behind a client-side filter that renders nothing to a scraper. **The Tunisia entry could not be retrieved.** RSM also notes that September 2027 requirements are still being finalised (final 1 October 2026), so this needs checking after that date regardless.

- **Maastricht BISS.** The portfolio alternative to GMAT/GRE is open only to applicants from AACSB- or EQUIS-accredited institutions. If Esprit holds neither, GMAT/GRE is unavoidable.
- **EUR — Media and Business.** The widely-quoted "15 EC media and communication" floor applies only to internal ESHCC students, not to external applicants. Whether a BI Licence reads as "social sciences or humanities" is undecided on the page.
- **IAD (Belgium).** The full official programme guide contains **no** credit figure. The French-Community 180-credit decree would apply in principle, but IAD does not state it.

Germany, Switzerland, France, Iberia — the hard numbers

This is the only territory that publishes credit floors in bulk, and the news is mostly good.

Confirmed exclusions and make-up obligations

Institution / programme	Floor	What it means for a 180-ECTS licence
Dauphine-PSL — M2 Big Data / Data-Driven	240	HARD EXCLUSION. "Students who have completed a BAC+4 degree (a four-year degree worth 240 ECTS credits)". Dauphine's own page says bachelor holders should apply to Master 1 instead — that is the viable route, and it costs a year
HEC Liège — ingénieur de gestion	240	Conditional; the 240 figure comes from the programme's own access rules
TH Köln (Cologne Game Lab) — Digital Games	210	Admissible but conditional: 180-ECTS holders "may only be offered conditional admission" and must obtain an additional 30 ECTS while enrolled , stacked on a 90-ECTS master
Hochschule Rhein-Waal — Design and Interaction	210	180 accepted only with make-up examinations
IÉSEG	180	Not an exclusion, but 180-ECTS holders are locked into the Regular Track ; the Fast Track needs 240. Costs about €3,000 more and a longer programme
Macromedia	180	Structural rather than a barrier: 210 ECTS → a 3-semester master, 180 ECTS → a 4-semester 120-ECTS master . The shortfall is absorbed by a longer degree
Bauhaus-Universität Weimar	none published	The examination board may impose <i>Zusatzleistungen</i> . The real risk is subject-specific: roughly 90 ECTS of maths and computer science (min 15 maths, 45 CS) — demanding for a BI licence
University of Geneva	180	Minor <i>Auflage</i> : at most 6 ECTS of co-requisite bachelor coursework inside semester 1. Trivial by comparison

The cleanest confirmations in the dataset

- **University of Münster** — the *Zugangs- und Zulassungsordnung* fixes access at "*eine Regelstudienzeit von mindestens sechs Semestern*" (= 180 ECTS), plus 72 LP across quantitative methods, computer science, information systems and business administration, and 24 LP in the chosen major.
- **University of Cologne** — accepts 180 with a two-option subject rule: either 30 ECTS BWL/VWL plus 24 ECTS quantitative, or 48 ECTS quantitative.

Both are tuition-free. Between them they are the strongest verified Track A entries in Germany for a 180-ECTS holder.

Positively met rather than merely silent

Esade, UPF, IE and X-HEC publish no credit floor, but their stated criterion is whether the degree "*entitles you to undertake postgraduate studies in the degree-granting country*" — which a Tunisian Licence does. These are recorded `yes` on the basis of that clause, not inferred from silence.

A non-credit barrier that outranks every number here

Filmuniversität Babelsberg requires DSH-1 German from applicants who did not obtain their school-leaving qualification at a German-language institution — despite the English-language programme description. For this applicant that matters more than any credit count.

Provenance warnings

- **ECAL and HEAD**: the 180 figure comes from the governing HES-SO regulation, not the schools' own pages, which state no number. Those rows cite HES-SO as the source.
- **ZHdK**: a third-party claim that 180-credit holders must make up credits could **not** be substantiated — no such clause exists in RO §19-24 or the MA Design Studienordnung.

Two fabricated quotes caught during this pass

Both by agents checking a summariser against the original document:

1. A page summariser returned "*Bachelor-Abschluss ... mit mindestens 180 ECTS-Punkten*" for the Bauhaus-Weimar *Studienordnung*. **That wording is not in the document** — the agent extracted the PDF itself and §2 contains no credit figure.
2. A WebFetch summarisation claimed "*180 crédits*" appeared in IAD's programme guide. The agent read the full four-page original and found no credit figure anywhere.

Treat any PDF-derived quotation in this dataset as carrying that risk. Where a number matters to a decision, open the source PDF yourself — every row now carries the URL.
